

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A spa capsule partially enclosing a person's body to provide a simulated environment by stimulating the auditory, olfactory, optic and tactile senses of the body comprising a cabinet having a head end and a foot end, said cabinet having a lid hingedly connected at said foot end, said cabinet and said lid forming an enclosed space, said lid open at said head end, said cabinet having means for selectively producing sounds, odors, visual images and massage in said enclosed space wherein each sense may be stimulated in sequence or simultaneously, said means for massage includes a movable array of fluid nozzles mounted in said enclosed space, said array intermittently connected to a supply of pressurized fluid producing pulses of fluid pressure in said

enclosed space,

a controller operatively connected to said array and said supply to control

movement of said array and fluid flow to said nozzles, wherein said means for

massage includes a plastic liner surrounding said fluid nozzles and movable

therewith, said plastic liner connected to a drain mechanism extending from said

liner to a holding tank, said holding tank connected to said supply of

pressurized fluid for recycling of said fluid, and a heat exchanger ~~exchange means~~ in fluid communication with said holding tank, said heat exchanger having an intake supply line from said holding tank to said heat exchanger, said heat exchanger having an outlet supply line from said heat exchanger to said holding tank, a pump in said supply line to circulate said fluid, a vent is said cabinet connecting said heat exchanger with the ambient atmosphere, and a fan in said vent for circulating air over said heat exchanger wherein temperature of said fluid is controllably adjusted.

2. (Original) The spa capsule of claim 1 wherein longitudinal rods are connected to said

lid extending from said head end to said foot end, said movable array of fluid nozzles are suspended from said rods for longitudinal movement in said enclosed space, said movable array including a plate for maintaining the shape of said plastic liner, said plate attached at the periphery to said plastic liner.

3. (Original) The spa capsule of claim 1 wherein said fluid is a liquid.

4. (Currently amended) In a spa capsule partially enclosing a person's body to provide a simulated environment by stimulating the optic senses containing:

an elongated cabinet having a foot and a head end, said cabinet having an elongated lid, said cabinet and lid forming an enclosed space, said lid open at said head end, said cabinet including means for stimulating the auditory and optic senses by conveying certain sounds and certain visual images into said enclosed space, a bed located in said cabinet, said bed having an aperture therethrough to accommodate the face of a person in the prone position, and an optical system below said bed to put said

visual images in view of said prone person;

said cabinet further includes means for stimulating tactile senses by modifying heat and light in said enclosed space, said means for stimulating said tactile senses including a hydro-massage mechanism that applies pressure to specific points on the body, said pressure being momentary and repetitive, the improvement comprising;

~~heat exchange means~~ a closed circulation system for circulating fluid to said hydro-massage mechanism mounted in said cabinet, said circulation system including a holding tank with a first inlet and a first outlet, a movable array of fluid nozzles connected to said first outlet, a circulation pump between said first outlet and said movable array, said first inlet connected to said movable array for return of said fluid to said holding tank, said holding tank having a second inlet and a second outlet, said second outlet connected to an inlet of a heat exchanger, said second inlet connected to an outlet of said heat exchanger, a pump in said second outlet line to force said fluid through said heat exchanger and return to said holding tank, and a vent in said cabinet connecting said heat exchanger and the ambient atmosphere, said vent including a fan.

5. (New) The spa capsule of claim 1 wherein said movable plastic liner is waterproof, a fabric shroud extends across said lid, said plastic liner in sliding contact with said shroud during movement of said plastic liner.
